Small-scale renewable assets in Albania are eligible for feed-in-tariffs guaranteed through the obligatory purchase of energy by the distribution system operator (DSO).

The purpose of this study is to understand more about the use of photovoltaic energy in Albania, the installation costs of a photovoltaic energy production system, are these systems assembled and ...

In this context, this paper presents the impact of small-scale photovoltaic penetration in a radial feeder of the Albanian distribution system, in different connection points (in each feeder's transformer, in the ...

With the energy crisis repeating itself over the years, now more than ever is the moment to assess and fully use this opportunity. This paper studies the current state of PV usage in Albania's energy sector ...

Based on the unexploited hydro capacity of Albania, government policies have encouraged continued investment in order to build new hydropower plants (HPPs). Meanwhile, most of them are ...

As Albania moves towards a more diversified renewable energy mix in its power system, the distribution network will increasingly be the backbone and determining factor of the scale at which renewables ...

Representatives of energy ministries, electricity distribution system operators and regulatory bodies as well as international experts attended a field trip and presentations in Albania ...

Most of the existing solar power plants in Albania are small-scale installations, with a capacity of less than 5 MW. This paper will focus on the use of photovoltaic (PV) technology in...
