While any uninformed internet search may send you down the wrong path, we are here to tell you confidently that there are no human health risks associated with rooftop solar panels.

Explore the safety of solar panels for your health. This article clears up common misconceptions and explains why solar is a safe, renewable energy source.

Standing 3 feet from a rooftop system exposes you to less radiation than holding your phone to your ear. That's why the FCC doesn't regulate these low levels, they're safer than power ...

The short answer is that a properly installed and certified solar panel system is incredibly safe, offering more health benefits than risks. The potential health and safety concerns often stem ...

True for rooftop installations and large solar farms, global public health researchers have found in every study that solar panels do not cause cancer at any production level.

Little do people know that solar energy systems can be dangerous to their health, due to the EMF's emitted. Just one of scores of health impacts can be increased cancer risk.

A small share of panels contain trace amounts of cadmium, but this is a form of the metal that is stable and not a danger to human health.

Solar panels produce very low levels of electromagnetic radiation, similar to common household devices. This radiation is not harmful and does not pose a health risk.
