Solar power became part of the energy mix in 2013, following government policies aimed at supporting renewable energy development. The country now has seven large-scale solar projects that ...

Pakistan's solar sector is booming, yet the total installed capacity remains far below the global average. Specifically, solar energy in Pakistan accounts for just 0.9% of the country's total ...

Pakistan has witnessed one of the most rapid and unanticipated transitions to clean energy, driven largely by homes and businesses installing rooftop solar panels.

By around 2025, Pakistan's solar capacity (including all on- and off-grid installations) could realistically cross 25-30 GW, cementing solar as a central pillar of the nation's power landscape.

The speed of solar adoption in Pakistan has been unprecedented, says Jan Rosenow, leader of the energy program at the Environmental Change Institute at the University of Oxford.

Pakistan has grown its solar energy capacity by an astounding amount in a remarkably short space of time. The shock surge has given residents the power to survive blackouts, but it ...

Pakistan's solar boom grows out of a decades-long power sector crisis, which has caused many Pakistanis to lose faith in the state's ability to consistently provide reliable electricity. ...

Explore the future of Pakistan's energy mix in 2025. A new NEPRA report reveals solar power production is set to double, marking a major shift in renewable energy.
