Of the total global solar PV capacity, 40.73% is in China. Listed below are the five largest active solar PV power plants by capacity in China, according to GlobalData's power plants database.

The 277 GW of utility-scale solar capacity installed in China in 2024 alone is more than twice as much as the 121 GW of utility-scale solar capacity installed in the United States at the end of ...

China's solar power capacity has expanded dramatically over the past decade. The country is home to several of the largest solar power plants globally, including the Huanghe ...

China installed a record 315 GW (AC) of new solar capacity in 2025, lifting cumulative installed PV capacity to 1.2 TW and pushing non-fossil power sources past thermal generation for the ...

Solar Power Plants in China China generates solar-powered energy from 1,316 solar power plants across the country. In total, these solar power plants has a capacity of 54551.8 MW.

We provide a remote sensing derived dataset for large-scale ground-mounted photovoltaic (PV) power stations in China of 2020, which has high spatial resolution of 10 meters.

As of 2025, there were over 10 thousand solar farms in operation in China with a combined capacity of over 447.51 gigawatts. The east Chinese province Zhejiang had the highest ...

China is a solar energy hub that houses a number of the world's largest solar power plants. Over the last few years, China, which is the top emitter of greenhouse gases (GHG), has increased its share of ...
