-----

The energy generated by the offshore solar platforms travels via a 66-kilovolt submarine cable, the first of its kind in China for marine photovoltaic applications.

The floating solar power plant is situated around 8km off the coast of Dongying City, on the eastern coast of China, adjacent to the Bohai Sea.

Continuing to diversify its renewable energy sources, China is expanding its offshore solar farms. A 1.8 GW offshore photovoltaic (PV) facility is now being built in the Bohai Sea.

This ambitious development marks the country's first large-scale offshore solar installation in northern China's Bohai Sea. Engineers report steady progress at the sea-based site.

Officials in China recently announced the construction of a huge 1.8-gigawatt floating solar energy project in the Bohai Sea. Once completed, the solar project -- located off the coast of ...

With ample shoreline resources, high solar irradiation, and proximity to load centres along the eastern seaboard, offshore PV is viewed as one of the most promising paths for clean ...

China is advancing its marine solar ambitions with a major 1.8 GW offshore PV demonstration project in Changli county, Qinhuangdao, Hebei province.

1.8 GW of floating solar just got the green light in China's Bohai Sea ?--and Zhejiang's 2 GW fishery-solar park is poised to scale next.
