How many solar panels do you need to power a house?

The goal for any solar project should be 100% electricity offset and maximum savings -- not necessarily to cram as many panels on a roof as possible. So, the number of panels you need to power a house varies based on three main factors: In this article, we'll show you how to manually calculate how many panels you'll need to power your home.

How many solar panels to power a house full-time?

To calculate how many solar panels to power a house, full-time, let's look at the square footage of a house under a microscope. The formula used to calculate how many solar panels to power a 1000 square foot house, is either to add up 12 months' worth of the kWh on the electric utility bills or multiply an average number by 12.

Can you run a house on solar power alone?

By pairing solar panels with battery storage, it is very possible to run a house on solar power alone. And in many areas, it's cheaper than paying for electricity through a local utility. Without battery storage, you can use a combination of solar and grid electricity to run your house.

How many solar panels to power a 1000 square foot house?

The formula used to calculate how many solar panels to power a 1000 square foot house, is either to add up 12 months' worth of the kWh on the electric utility bills or multiply an average number by 12. If this can be done for 2 years it would increase the accuracy of the kWh readings to enable the correct number of solar panels to be bought.

Find out how many solar panels you need based on your energy use, location, and panel type. Read our guide here to determine your solar requirements.

Calculating how many solar panels to power a house for every size, type, and location isn't just as easy as counting all the rooms, glancing at the latest electricity bill, and picking a couple of ...
