Submit your inquiry about hybrid electric systems, solar panels, solar cells, inverters, and energy storage applications. Our solar experts will reply within 24 hours.

The archipelago of Cape Verde is a developing state in West Africa with extreme external energy dependency on refined oil imports despite their available solar and wind resources.

These high-tech systems act like a "power bank" for entire communities, storing excess energy during sunny days and releasing it when clouds roll in. "Cape Verde aims to generate 50% of its electricity ...

This pioneering project is set to transform industrial energy use by replacing polluting diesel generators with a large-scale battery storage system powered by solar energy.

Cape Verde can meet its goal of 50% renewables today by integrating energy storage. A 100% Renewable System is achieved from 2026, with a 20 year cost from 68 to 107 MEUR.

**CAPE VERDE ENERGY STORAGE SOLAR POWER SOLUTIONS.** Our certified energy specialists provide round-the-clock monitoring and support for all installed home energy storage systems.

In Cape Verde, a country with 100% electrification goals by 2030, these rugged containers are the unsung heroes bridging solar panels, wind turbines, and reliable electricity.

The project, considered the world's largest solar-storage project, will install 3.5GW of solar photovoltaic capacity and a 4.5GWh battery storage system. The project has commenced in November 2024. [pdf]
