Our design solar panels make it possible to combine aesthetics, energy generation and circularity in one facade solution. This allows you to use the entire building shell, the roof remains free for other ...

These circular facade panels are modular in structure, available in vibrant colors and patterns, and fully customizable to match any design. Thanks to our advanced technology, energy ...

The building's 16 faceted sides are uniformly clad in fiber-cement panels, manufactured by SwissPearl, in a pattern modeled after the structure of beehives. Interspersed among these panels are custom ...

With project partners BIPV.world, Sioux Technologies, Rimas, Steinfort glas, Brainstorm en Concept, and TNO, the project aims to accelerate the transition to circularity and renewable energy. The ...

Construction began in 2018 for bifacial solar panels over end-of-life (EOL), recycled materials and circular building products field tested in an urban area with high pollution impacting efficiency, ...

Implementing a circular approach to panel management is crucial for ensuring the long-term sustainability of solar energy. The goal of the CircSolar project is to develop a proposal for a new ...

The solar facade, featuring a glass finish and invisible high-efficiency photovoltaic cells, seamlessly integrates with the prismatic shape of the new building.

The incorporation of a circular energy hub with an integrated photovoltaic halo and renewable energy systems serves as the foundation for a sustainable urban environment designed to enhance ...
