Few trends in the global energy landscape catch the eye like China's solar capacity growth. Just 15 years ago, China ranked eighth in the world for annual power generation from solar, ...

The increased power capacity would mark a major milestone in the country's long-standing effort to build a cleaner power system.

China has developed over 900 GW of wind and solar domestically over the past five years. And overseas investments have grown as well, particularly in Belt and Road countries. But in ...

Nearly 70 percent of China's foreign power investments from 2022 to 2023 were in renewables like solar and wind, surpassing fossil fuels for the first time since Beijing started backing ...

The continent imported 60% more solar panels from China over the past year, though a lack of reliable installation data makes it a challenge to track the true pace of deployment.

A large part of the solar power capacity installed in China is in the form of large PV power plants in the west of the country, an area much less populated than the eastern part but with better solar ...

China is expanding renewable energy exponentially while the U.S. is going backward. How China became the global leader, why the U.S. falling behind and what it means for these ...

China is adding more solar and wind power to its energy grid than any other economy - but that huge buildout has its challenges. Here's what we can learn
