DERs - such as solar PV, wind, batteries, and small modular gas turbines - enable local power generation while also reducing vulnerability to targeted attacks. IEA analysis shows that a ...

As a model for this initiative, we have installed hybrid solar power systems at a school in Hostomel, Kyiv Oblast, and an outpatient clinic in Mykolaiv. These installations aim to reduce reliance on diesel ...

Russia's constant bombing of Ukraine's energy infrastructure has sparked a groundswell of innovation in clean, reliable power, from building microgrids to solar power stations.

In a significant move towards energy resilience and sustainability, Vodafone Ukraine has announced an ambitious plan to equip 100 of its mobile base stations with solar power facilities.

In the two and a half years since Russia invaded Ukraine, Ukraine's energy system has been a regular target, with attacks on thermal and hydro assets, substations, and solar units.

This article examines the economic efficiency of installing such power plants in the residential sector of Ukraine under different state support schemes.

Ukraine combines solar panels and wind turbines to create powerful hybrid systems that work around the clock. These smart energy setups use advanced storage technology to keep electricity flowing, ...

Ukraine did have some pre-war structural strengths that have helped its resilience. In particular, it had an especially strong transmission system designed to carry roughly 56 GW of ...
