The Milky Way is vast, and our Solar System is located in a relatively quiet part of it. Within the galactic disk, the Sun resides in the Orion Arm --a minor spiral arm nestled between two ...

The Milky Way is our galactic home, part of the story of how we came to be. Astronomers have learned that it's a large spiral galaxy, similar to many others, but also different in ways that reflect its unique ...

The Milky Way is currently hurtling towards Andromeda at 250,000mph (400,000 km/h). Though there is no need to worry just yet, this crash of cosmic proportions is not due for another 4...

The inverse-square law means that there is a trade-off for using solar panels; in general, solar panels are cheaper and more readily available than nuclear options such as RTGs, but they come with ...

Let's think big: surround the sun with solar panels. And while we're at it, let's again make them 100% efficient. Never-mind the fact that a 4 mm-thick structure surrounding the sun at the ...

The Milky Way is a barred galaxy made up of stars, gas and dust bound together by gravity. It formed around 13.6 billion years ago.

In its World Energy Outlook 2020 report, the International Energy Agency (IEA) confirmed that solar power schemes now offer the cheapest electricity in history.

Milky Way Galaxy (sometimes simply called the Galaxy), large spiral system of about several hundred billion stars, one of which is the Sun. It takes its name from the Milky Way, the ...
