Probably not. If you have solar and the power goes out, your power will go out, too--unless you have a backup system. This is because U.S. electrical code requires rapid shutdown of a solar system to ...

Yes, solar panels continue generating electricity during outages as long as sunlight is available, but most systems won't power your home without proper backup configuration.

Pairing solar with storage can help make solar energy available during outages. With new grid-forming inverters, a solar-plus-storage system may be able restart the grid after disruptions if the system is ...

From solar-powered towns to affordable home batteries, discover how homeowners are building energy resilience to stay powered during outages and extreme weather.

Our friendly solar consultants are here to help answer your questions and address any concerns. We provide a free, no-obligation consultation where we can discuss the best solutions for ...

A common misconception is that solar panels will continue to work and provide your home with power during a blackout, but solar panels do not work during a power outage.

Portable solar generators are becoming the go-to solution many people choose to keep their homes operating during a grid outage.

Wondering whether solar panels can get you through a blackout? Learn what it takes and find out how they interact with a backup generator.
