The aim of this scientific work is to evaluate the influence of harmonic disturbances on the lifetime of a domestic substation (Tree-Phase) in the city of Niamey.

In this paper, a methodology of grid weakness analyzing is presented. It is based on long term real data collected, more than ten years, from the electrical company of Niger (Nigelec).

Safety Protocols: Heat stress management, battery handling procedures, PPE compliance with IEC standards.
Commissioning: BESS functional tests, inverter programming, SCADA synchronization.

This research paper presents an optimal microgrid planning framework aimed at enhancing electricity security in Niamey, Niger, in response to supply disruptions from Nigeria.

Safety innovations including multi-stage fire suppression and thermal runaway prevention systems have reduced insurance premiums by 35% for industrial storage projects. New modular designs enable ...

This study has successfully demonstrated the feasibility and strategic advantages of implementing hybrid renewable energy systems to enhance electricity security in Niamey.

Facing the pressing urgency for resilience studies, the objective of this paper is to investigate the resilience of power systems. It summarizes practices taken by governments, utilities, ...
