Table is by default sorted by operational storage capacity in MWh. Minimum capacity for inclusion is either 100 MWh or 100 MW, with a minimum of 1 hour of storage.

Key details include location, technology type, power and energy capacities (where available), commissioning year, and owner/operator.

This is a list of energy storage power plants worldwide, other than pumped hydro storage. Many individual energy storage plants augment electrical grids by capturing excess electrical energy during ...

Geothermal plants are classified into three types: dry steam power stations, flash steam power stations, and binary cycle power stations, all of which generate energy using steam turbines.

From the UK to the UEA and USA to Australia, Energy Digital Magazine runs through 10 of the most impressive energy storage projects worldwide. Energy storage plays a pivotal role in the ...

Data and information about power plants and their location across the globe, plotted on an Interactive world map

This document lists and provides details on various large-scale energy storage power plants around the world, with an emphasis on non-hydroelectric plants. It includes plants that store energy through ...

The following page lists all pumped-storage hydroelectric power stations that are larger than 1,000 MW in installed generating capacity, which are currently operational or under construction.
