Two decades ago, the European Union got basically none of its power from wind and solar. Now, those are the leading sources of electricity in the bloc. In 2025, wind and solar produced more ...

Wind and solar overtook fossil fuels in the European Union's power generation last year, a report has found, in a "major tipping point" for clean energy. Turbines spinning in the wind and ...

Wind and solar generated more EU electricity than fossil fuels for the first time in 2025, marking a "major milestone" in the transition to clean power.

Nuclear energy remains the leading source of electricity generation in the European Union, according to the London-based think tank Ember. Coal has continued its decline, while solar ...

This study conducts a systematic literature review of photovoltaic and wind energy potential in Europe to identify good practice in the calculation of such potential and compares the ...

The EU's electricity transition reached a new milestone in 2025 with wind and solar generating more power than fossil fuels.

Wind and solar generated more electricity across the European Union than fossil fuels for the first time last year, according to Ember's newly released European Electricity Review. Wind...

Europe is a pioneer in the deployment of modern renewable energy technologies. The region can boast to be the home of the first offshore wind park and the first continent to have seen...
