What are thermal magnetic circuit breakers?

Thermal magnetic circuit breakers are devices that provide protection against overcurrent in circuits. Circuit breakers use an automatically operated electrical switch to disrupt the flow of current when an overload or short circuit is detected. Thermal magnetic circuit breakers do this using an electromagnet and bimetallic strips.

What is a thermal breaker?

Thermal breakers are crucial components in electrical systems, designed to protect circuits and equipment from the harmful effects of excessive current. They offer a resettable alternative to traditional fuses, providing a more convenient and efficient solution for circuit protection.
