What is a flap gate valve?

Flap gate valves are used as back flow preventers and are available in a large range of sizes and types. Their design is an economical response for backflow. Fusible HDPE, Stainless Steel. WaGate

What is a flap valve?

Be Free of Debris! Troy Valve's flap valves, also known as flap check/gate valves, are engineered for excellence in water management applications. Designed to attach seamlessly to the end of a flanged pipe, our flap valves allow water to flow out while preventing backflow and debris, such as sticks and leaves, from entering the system.

What is a waGate flap valve?

WaGate flap valves prevent backflow for stormwater and waste water in pipe systems, chambers and basins. Used in ports, rivers and coastal areas and in the agricultural sector as well as for aquaculture. They are available in different models from DN100 to DN1600. Other sizes on request.

What are the advantages of a waFlap gate valve?

Advantages of the WaFlap: Flap gate valves are used as back flow preventers and are available in a large range of sizes and types. Their design is an economical response for backflow. Fusible HDPE, Stainless Steel.

Applications for our flap valves include isolation and prevention of backflow in chambers, tanks, manholes, control structures, and outfall and drain piping.

This particular Solid Waste Management Facility/Waste to Energy Plant has been successfully using Meyer Double Flapgate Valves for over a year. They are handling the abrasive and sometimes ...

These durable HDPE flap gates are designed to prevent backflow and should be installed on a wall or flat surface.

Our WaGate product range consists of gate valves, sluice gates and flap valves for flow control with corrosion free and non-polluting HDPE, EPDM and stainless steel. The valves can be customised ...

Flap gates prevent backflow for stormwater and wastewater in pipe systems, chambers and basins. Flap gates are typically used in applications where there is a risk of flooding or backup, such as in storm ...
