Made up of 54 countries, Africa gets more sunshine hours than any other continent. It has some of the highest levels of solar irradiance -- the power of the sun per square meter -- in the ...

Africa recorded its highest-ever solar capacity additions in 2025, with a 54% year-on-year increase, led by South Africa and Nigeria. South Africa added 1.6 GW, Nigeria 803 MW and Egypt ...

Africa's energy transition is showing a dual trend. Large utility-scale solar projects still make up more than half of total installed capacity, supplying power to national grids. However, distributed ...

This week, top officials from dozens of African countries convened with major international lenders to commit to the biggest rollout of renewable energy in the continent's history.

Data insight on the top 5 African countries in solar energy capacity, highlighting trends, investment drivers and what they mean for Africa's transition.

A new report from Power Shift Africa and the Institute for Sustainable Futures at the University of Technology Sydney shows how it can be done and why it needs to be a global priority.

New Global Solar Council report shows solar deployment spreading across more African countries, increasingly driven by distributed systems and rising demand for reliability -- while ...

Discover how Africa is transforming its energy landscape by harnessing solar power. Despite challenges, the continent's growing commitment to solar energy is paving the way for ...
