Electricity grid reinforcement programme investment to increase renewable energy generation capacity and adapt to climate change. For example grid in Western Estonia, which frequently fails in bad ...

Estonia's Skeleton Technologies and Hyosung are building Korea's first next-gen grid stabilizer -- keeping power steady as AI and renewables grow. Fueled by the AI boom, the world is scrambling ...

To ensure stability, Estonia has strengthened its high-capacity 330-kilovolt power lines and installed synchronous compensators to improve grid inertia. These measures will help maintain ...

Estonia boosts grid stability with SynCon tech amid green energy transition and European grid integration for a reliable renewable future. The Baltic region is undergoing an energy ...

Estonian transmission system operator Elering AS awarded Siemens Energy with a contract to build three synchronous condenser plants in Estonia. It is the first Flexible Alternating Current ...

Grid stability for Estonia: We are happy to announce the order of three synchronous condenser plants by Elering.

The first of three synchronous condensers for Estonia, installed early this year south of its capitol Tallinn, provides grid support that will be crucial when the Baltic states disconnect from Russia.

Discover how Estonia is enhancing grid stability with 400 MWh battery storage plants, preparing for Baltic power grid independence by 2025.
