How does electricity work in Cyprus?

Electricity in Cyprus is managed by the Electricity Authority of Cyprus. Power is primarily generated at three fuel oil-burning stations but the use of distributed renewable energy is expanding. About 97% of the primary energy use was imported in 2008.

How many energy storage applications have been approved in Cyprus?

The Cyprus Energy Regulatory Authority (CERA) representatives reported establishing a regulatory framework for energy storage in 2019, followed by market rules approval in 2021. The Cyprus Transmission System Operator has received 13 storage applications totaling 224 megawatts capacity, with eight applications processed and five under review.

Are there private power plants in Cyprus?

As a precondition to the accession of Cyprus to the European Union, the local market for electricity generation has been opened to private companies, but so far no private power plants have been built, although four licences have been granted by Cyprus Energy Regulatory Authority.

How many photovoltaic systems are there in Cyprus?

The number of photovoltaic systems in Cyprus rose by 66% in the year to July 2023, to over 45,000, with a capacity of 256 MW, the systems being used by each customer, including commercial, to reduce their electricity bill through an agreement of net-metering.

Data and information about power plants in Cyprus plotted on an interactive map.

The planned battery storage infrastructure, to be installed between 2026 and 2030, will have a total capacity of 160 megawatts with the capability to store renewable energy for 2-3 hours, ...

By June 2026 at the latest, the distributed energy storage system with a total capacity of 120 MW, which is currently being implemented, will be operational and will function with full ...

The government plans to complete a new energy storage system, along with storage installations at two Electricity Authority of Cyprus (EAC) power plants, by June 2026, Government ...
