How long does a solar installation take?

Besides the actual installation, the process involves applications, paperwork, approvals, and more. Expect it to take between two and six months before your solar installation is complete and you're cleared to use them. Let's take a closer look at this process and provide you with a timeline, including a detailed description of each step.

How long does it take to build a solar roof?

A solar engineer will take care of the design part. Your electricity usage, inverter and solar panel wiring, local building code requirements, and utility requirements are all taken into account when designing your system. This can take anywhere from two to three weeks on average, but it may take longer if your roof is more complex.

How long does a solar project take to complete?

Most projects will take 60-90 days to complete, if all goes well. Why trust EnergySage? You've made the decision, you've signed the contract: You're getting solar panels for your house! Now what? How soon until those rooftop panels are soaking up the sunshine, feeding clean energy to your home, and slashing your power bills?

How long do solar panels last?

Most solar equipment is backed by an industry standard warranty (often 20 years for solar panels and 10 years for inverters). Ensuring that system is backed by a strong warranty is often an indication that installer is using quality equipment.
