What are earthquake straps & brackets?

Earthquake straps and brackets attach to walls and other stable surfaces and secure items to prevent them from moving during an earthquake and potentially injuring people. Note: Product availability is real-time basis and adjusted continuously. The product will be reserved for you when you complete your order. © 1994 - 2026, W.W. Grainger, Inc.

What products are used to protect equipment during earthquakes?

Products designed to protect equipment and furniture during earthquakes by securing them to a structure/building. Includes products to protect smaller items such as microscopes, benchtop instruments/equipment, fire extinguishers, televisions, etc. Life saving supplies for 3 days.

What equipment should be used during a seismic event?

Hardware such as rigid and cable braces, retaining straps, concrete inserts, and structural bracing stabilize equipment and prevent it from moving during seismic events to minimize damage. Note: Product availability is real-time basis and adjusted continuously. The product will be reserved for you when you complete your order.

What are OSHPD preapproved anchors & brackets?

These OSHPD preapproved anchors and brackets support threaded-rod-mount hangers during seismic activity. A complete seismic bracing mount system consists of an upper bracket, a lower bracket, and strut or pipe (sold separately). Brackets work with standard-wall (Schedule 40) pipe sizes 1-2 as well as 1 5/8 " wide strut channel.

This document specifies the design of earthquake-resistant and subsidence-resistant ductile iron pipelines suitable for use in areas where seismic activity and land subsidence can be ...

When it comes to Seismic Bracing Hardware, you can count on Grainger. Supplies and solutions for every industry, plus easy ordering, fast delivery and 24/7 customer support.

They fit most of the usual ladder brackets on the market and it is also possible to attach other equipment, such as e.g. "Canalis rails" directly to this fastener.
