While most solar companies default to "south-facing is best," the reality is far more nuanced. Your optimal panel direction depends on factors most installers never even consider.

Understanding the best solar panel orientation is essential to maximizing the efficiency and output of your solar power system. Whether you're installing a solar panel for home use or a ...

Optimizing your solar panel direction and orientation is one of the most impactful decisions you can make for your solar investment. The right positioning can increase your energy production ...

Learn the best direction for solar panels to optimize energy efficiency and savings. Find expert advice on positioning your panels for maximum performance.

The general rule for solar panel placement in the northern hemisphere is that solar panels should face true south (and in the southern, true north). This is usually the best direction ...

The solar panel direction calculator will take all of these factors into account and tell you the best way to orient your panels. With this information, you can get the most out of your solar ...

For homeowners in the northern hemisphere, south-facing panels are ideal. Since the sun travels across the southern half of the sky, this direction ensures maximum exposure throughout the day. Studies ...

Because solar panels are so much cheaper than they used to be, my usual advice is to simply fill your roof and install as much solar capacity as will reasonably fit, regardless of direction.
