The grass seeded under solar panels needs to be maintained so it doesn't compete with the panels for sunlight. This can be done with a mower or, as many are discovering, with livestock.

On solar farms, sheep graze beneath and around the panels, naturally managing vegetation without the need for mowing or chemicals. This approach keeps the land agriculturally ...

In 2023, the Spanish company Iberdrola announced the installation of a flock of 300 sheep in its photovoltaic parks in Portugal. "It is beneficial for the solar park, as it ensures the ...

Discover how solar grazing with sheep under PV panels can transform land management and energy efficiency, revealing benefits you won't want to miss.

Sheep grazing between solar arrays showed no negative health impacts. Instead, researchers documented enhanced wool quality with increased fiber strength and growth rates. The ...

It's a simple but brilliant idea: instead of using loud mowers or chemicals to manage vegetation under solar panels, why not let sheep do the job naturally? This is not just cute but ...

There are design adjustments to make, such as mounting panels high enough for sheep to walk underneath or employing rotating panels to coordinate sun and shade for crops.

Thousands of sheep grazing under solar panels are experiencing unexpected changes that could reshape farming. The surprising benefits go beyond simple shelter, hinting at something ...
