In the 21st century, the drive towards a cleaner, more sustainable London has become a cornerstone of city policy. Authorities are rolling out a raft of strategies aimed at energy saving and ...

This LAEP presents a potential vision for a net zero local energy system in the City of London, with a route map to getting there, including a set of actions for the City Corporation,...

Reaching net zero quickly is the best way to offset the worst of the climate crisis. How we manage that transition is crucial. At the City of London Corporation, we view the net zero transition as...

Historic England asked UCL to provide data on listed buildings and conservation areas in London and their use of energy, and to make analyses.

You can find areas that we are actively tackling below and learn more about how we're helping London's homes, businesses and public buildings to use less energy and save money on their energy...

The proposal will be launched at this year's London Conference - Centre for London's flagship annual event bringing together city leaders, policymakers and business - marking a major ...

By improving efficiency and investing in low-carbon energy solutions, such as heat pumps and solar power, we can make a real impact on the City Corporation's energy emissions.

MEEF supports projects that deliver new low carbon technology or upgrade existing infrastructure to help achieve the Mayor's ambition to make London net zero by 2030.
