The government is set to miss its target of installing more than 1,200 new public electric vehicle (EV) charging points across Malta and Gozo by the end of 2025, figures released to this ...

Subsidising purchases of EVs will only do so much to get Malta to move away from conventional, fossil fuel-powered cars. Today, not having adequate charging infrastructure to support ...

Thus, the more Battery Electric Vehicles are introduced on our roads, the more benefits can be experienced to the air quality. In view of this, the Government has launched various incentives that ...

Malta's aging grid, built for predictable fossil fuel plants, can't handle today's solar spikes and EV charging loads. But here's the kicker - the island's actually generating excess renewable energy ...

As electric vehicles (EVs) become increasingly popular, businesses across various industries are recognizing the importance of integrating EV charging infrastructure into their operations.

Discover how electric cars in Malta are transforming the future with government incentives, benefits, and challenges.

However, the government is investing in an additional 1,200 charging pillars to be spread across both islands, aiming to bolster accessibility and convenience for electric car owners, the ...

In line with the Maltese Government's policy to promote the uptake of Electric Vehicles, this National Policy aims to cover the charging infrastructure for plug-in and electric vehicles accessible by the public.
