Industrial microgrids are independent energy systems that provide stable power supply to production facilities. In this study, the potential of Russian regions to implement this technology was ...

The paper substantiates the composition and choice of a microgrid for settlements in the Central European part of Russia that are not connected to centralized public electricity networks.

In both models of energy sector development, the priority development of microgrids is necessary for isolated and island territories, first and foremost in the Far East of Russia.

YANMAR Energy System participated in the NEDO's international demonstration project for a high-efficiency energy supply system by constructing a microgrid including wind power environment in ...

In the Far Eastern region of the Russian Federation (hereinafter referred to as "Russia"), many areas are not connected to large-scale power grids and therefore maintain small-scale ...

One of the first steps in building a model of the Internet of energy in Russia may be the introduction of a mechanism for creating industrial microgrids, for which a draft resolution of the government of the ...

Russia's modular microgrid box system market is expected to grow at a CAGR of 10.7% through 2030, driven primarily by energy access initiatives in remote and Arctic regions.

Improving energy efficiency keeps on being one of the most pressing problems for Russian industry. The paper aims to examine the prospects of using microgrids in Russian regions, including in the old ...
