Microwind is a software that simulates and designs integrated circuits at physical description level. It is developed for Windows platform and used by universities worldwide to teach CMOS concepts.

The parametric analysis within Microwind is a powerful tool for rapid investigation of the effect of some parameter variation on the behavior of the circuit. An example of analysis may be the effect of the ...

With inbuilt layout editing tools, mix-signal simulator, MOS characteristic viewer and more, it allows students to learn complete design process with ease.

MICROWIND software comes from Toulouse, France, offering innovative and shorter learning curve tool for CMOS layout designs. It's used by thousands of budding engineers and teachers across the globe.
