---

Due to increases in demand for electric vehicles (EVs), renewable energies, and a wide range of consumer goods, the demand for energy storage batteries has increased considerably from ...

For energy storage, the new Chinese policy emphasized the need to remove energy storage as a prerequisite for renewable energy project grid connection, a requirement that has been ...

Lunar Energy raises \$232 million in new funding to massively scale production of its home battery systems and virtual power plant software, aiming for 100,000 units by 2028 as demand ...

The IRA has the potential to greatly expand solar and energy storage manufacturing in the United States. For energy storage, the IRA offers incentives to produce electrode active materials, battery ...

Those selected projects will retrofit, expand, and build new domestic facilities for battery-grade processed critical minerals, battery components, battery manufacturing, and recycling.

Several automakers have reported strong growth in EV sales over the last two years, largely helped by consumer incentives and favorable financing. With more battery packs about to be ...

Across the United States, battery energy storage is rapidly emerging from a niche technology into mainstream grid infrastructure. The growing attractiveness of battery energy storage ...

Global demand for energy storage is surging. Lithium-ion leads today, but new contenders like sodium-ion, flow, and gravity systems are shaping the future grid.
