New Zealand has four major energy suppliers -- Meridian, Contact, Genesis, and Mercury. According to the NZ Electricity Authority, "New Zealand is transitioning to a highly renewable...

As the country embarks on an ambitious energy transition, it has many natural advantages, including a strong renewable resource base. New Zealand already has a low-emissions electricity system, with ...

Renewable energy sources are growing quickly and will play a vital role in tackling climate change.

Learn about the renewable energy sources and carriers that New Zealand is reliant on, and that will play a role in our low-emissions future.

The electricity sector in New Zealand uses mainly renewable energy, such as hydropower, geothermal power and increasingly wind energy. As of 2021, the country generated 81.2% of its electricity from ...

NZ's energy minister says the government's policies have led to a renewable energy boom, but official figures show the boom began long before the coalition took office.

Renewable energy generation already represents a very high proportion of New Zealand's overall generation mix, with approximately 86% of total electricity generation coming from ...

New Zealand's electricity is mostly generated through renewable sources such as hydro and geothermal energy. Our renewable generation is supplemented by thermal "peaker" plants when ...
