How does the growing dome solar greenhouse kit work?

The Growing Dome Solar Greenhouse Kit also comes with photovoltaic panels to use direct solar energy to power the ventilation systems in the greenhouse. In the undersoil system, a small fan draws warm or cool air through pipes buried in the raised beds.

What is included in a greenhouse kit?

The greenhouse kit contains the fan, distribution box, and a solar panel to power the fan. The corrugated pipe is one of the locally purchased items and readily available through most building supply stores. The 15', 18', 22', and 26' Growing Dome Kits come standard with one thermostatically controlled, photo-voltaic solar-powered, 12V fan.

What is a growing dome greenhouse?

Due to these active solar components, the Growing Dome greenhouse is perfect for off-grid living. The power of the sun is also used to heat the Above-Ground Pond, the main thermal mass of the solar greenhouse. It is always located on the north side of the greenhouse, allowing for maximum heat gain during the day.

Why should I buy a solar greenhouse?

It is inspiring to look out and see green growing plants in the middle of winter. The warmth of this small passive solar greenhouse inspires our hopes for spring and motivates our desire to plant in our garden. I really enjoy being able to harvest and enjoy fresh lettuce, kale, carrots, broccoli and more from my SunCatcher during the winter months.

Our family owned, western North Carolina greenhouse business has been helping local growers and communities grow all year round with our passive solar powered greenhouse designs.

Check out our greenhouses for sale by size and style first. Learn about our insulative building materials and other specifications for each type and style of greenhouse.
