A massive open-sea solar plant is under construction in China, designed to power millions of homes and test how floating solar works at scale.

The continent imported 60% more solar panels from China over the past year, though a lack of reliable installation data makes it a challenge to track the true pace of deployment.

Some of the largest projects under development are in the Inner Mongolia region in northern China. The Kubuqi Desert in Inner Mongolia is the planned site of the largest collection of ...

China is adding more solar and wind power to its energy grid than any other economy - but that huge buildout has its challenges. Here's what we can learn

To boost rooftop solar development and increase local production of clean energy, the Chinese government rolled out its Whole County PV programme in 2021.

China installed more solar panels in power plants than on rooftops last year for the first time since 2020 as President Xi Jinping's push to build large-scale renewable facilities in inland ...

China's solar energy production is reaching simply staggering levels, dragging energy costs down around the globe.

As a global leader in solar panel manufacturing, China produces a variety of solar products designed for outdoor applications. This guide delves into the features, types, and benefits of ...
