---

The UL 2703 testing protocol involves a comprehensive evaluation of the racking and mounting systems design, materials, and performance. The following steps outline the testing process:

The photovoltaic bracket certification process acts as that crucial quality checkpoint for solar mounting systems. As solar installations multiply faster than mushrooms after rain, third-party validation ...

Our new Racking System service enables us to test and certify ground mount racking systems and clamping devices for flat-plate PV modules and panels. This new technology was developed ...

Understand the key certifications for PV module manufacturing. Our guide covers IEC, UL, and CE certification for solar energy to ensure safety and market access.

UL 2703, the Standard for Safety for Mounting Systems, Mounting Devices, Clamping/Retention Devices, and Ground Lugs for Use with Flat-Plate Photovoltaic Modules and ...

UL 2703 is the specific standard for photovoltaic (PV) mounting systems. This standard covers aspects like structural integrity, corrosion resistance, and electrical safety.

Learn how UL Solutions can help you demonstrate safety with certification services which evaluate proper grounding of your photovoltaic (PV) power systems

We test and certify PV racking and tracking systems--full or component certification--to comply with national and international standards, including ANSI/UL, CAN/CSA, and IEC.
