During the early stages of the global photovoltaic (PV) development, Europe held a significant share of the market and the industry. However, over time, other regions, particularly China, began to gain ...

SolarEdge has begun exporting US-made residential solar inverters to Europe, a rare move as few US solar manufacturers ship hardware abroad.

Our five-year outlook foresees significant BESS expansion in Europe - a sixfold increase to nearly 120 GWh by 2029, driving total capacity to 400 GWh, yet falls short of energy transition needs.

Summary: Discover how solar energy storage equipment exports are reshaping renewable energy markets worldwide. Learn about growth drivers, regional opportunities, and innovative solutions for ...

During January-October 2024, EU countries imported approximately 83 GW of PV modules from China, with total imports expected to be around 100 GW by the end of the year. These ...

EU electrification is stagnating at around 23%. We must achieve 35% within 5 years. We look forward to working with the new European Commission and Parliament as they introduce game ...

The Middle East and North Africa can exploit solar energy resources and export them to Europe and South Asia for a sustainable future of the world. A high voltage direct current (HVDC) ...

Meeting international energy and climate goals requires the global deployment of solar PV to grow on an unprecedented scale. This in turn demands a major additional expansion in manufacturing capacity, ...
