---

For over 10 years, Palmetto has installed, maintained, repaired and replaced thousands of solar energy systems across the nation.

First promising results on the long-term behaviour of repair solutions with flowable silicone and polyurethane (2K) are obtained: the test-site with 12 repair-modules is in operation since summer ...

The study's findings offer actionable recommendations for PV operators, technicians, and researchers seeking to adopt AI-IoT solutions to improve solar asset management, while also ...

Emerging "Design for Repair" concepts: Current research explores reversible adhesives, self-healing materials, and encapsulant-free designs to enable easier repair and cell replacement in PV modules

Suncycle offers beside standard test & repair methods also intrinsically-developed procedures for all components of photovoltaic systems. One of our core competencies is the project management and ...

Extending the lifetime of photovoltaic (PV) modules is a key challenge as PV becomes increasingly important as a renewable energy source. One way to extend the

One of the most frequent failures in PV modules is the total or partial interruption of ribbons that connect the cells in the module.

France-based DOTSun has developed an on-site repair solution for solar panels with degraded backsheets, compatible with PA, PVDF, and PET types.
