I made this detailed video for beginners who want to try using DIRECT DC solar panel feeds to heat their home, shop or office.

California-based Apparent Inc. has unveiled a new water heater that can reportedly offset 100% of a home's water heating cost. The system uses low-voltage DC electricity generated by ...

Heating water directly using a DC water heating element together with either a wind turbine generator or photovoltaic panel (with or without a battery bank) is commonly used in diy solar ...

You can use a solar panel to make hot water or to keep water from freezing. Simply wire the solar panel directly to the DC water heating element or through a thermostat to regulate the water ...

Hi folks, I'm going to briefly cover some concepts that are helpful to understand when driving loads directly with PV DC solar panels: whether it is a fan, a heating element, an electric ...

Having panels only for a water heater can be a great waste of energy. A power point controller can run in parallel with a conventional MPPT charge controller to harvest excess energy.

The ACDC solar heat pumps need no batteries, and uses from just three PV solar panels, up to six according to model selected and user requirements, to deliver a large savings.

Yes, solar panels can be used to directly heat a house by wiring them to compatible DC heating systems like radiant floor heaters. This provides supplemental heat, reducing conventional ...
