I have a proven track record of delivering high-quality results, improving system performance, and solving complex technical challenges.

Managed a crew for design and installation of roof and ground mount solar systems including generating wiring schemes. Participated in installing over 150 PV solar systems across the Bay...

In this paper, we consider the economics of concentrated photovoltaics (CPV), which offer significantly higher efficiency and greater energy production over traditional fixed flat-plate PV installations in high ...

Four approaches to modeling multi-junction concentrating photovoltaic system performance are assessed by comparing modeled performance to measured performance. Measured weather, ...

Well, sun my buns and call me solar-powered! profileSOLAR has now determined the viability of solar PV systems in over 900 cities across the globe by utilizing empirical solar and...

Known for his ability to understand and evaluate complex technical data, the PV Systems Designer is responsible for crafting some of the most energy efficient and cost-effective ...

Electrically reconfigurable arrays have been proposed to increase the power output of shaded PV systems. In this paper, an electrically reconfigurable PV array was built using the total ...

Drove sustainable residential photovoltaic (PV) and energy storage engineering designs by providing leadership and project guidance to 60+ designers. Partnered with principal thought leaders to...
