In 2021, he and his family began contracting with solar farms -- sites with hundreds of thousands of solar modules -- to use his sheep to eat the grass. What was once a small business ...

Discover how integrating sheep with solar farms enhances land management and sustainability. Learn about the benefits of using sheep for vegetation control, cost-effective ...

Livestock are a very effective vegetative management tool for community and utility solar energy systems. Cattle are grazed in some solar projects, but typically it is sheep that are used to ...

Learn how solar grazing with sheep is revolutionizing vegetation management at solar farms while preserving agricultural land.

Solar shepherds, who manage sheep grazing under solar panels, are part of a growing movement that combines agriculture and renewable energy -- and offers high incomes in the process.

The study, led by engineering and Ivey Business School professor Joshua Pearce, shows utilizing sheep on solar farms was not only lucrative for farmers but offered a promising path forward ...

In a groundbreaking study that combines renewable energy with traditional farming practices, researchers have observed remarkable changes in 1,700 sheep grazing amidst solar panels.

As the demand for renewable energy grows, solar farms are increasingly becoming a cornerstone of sustainable power generation. But there's an unexpected partner playing a pivotal role in the success ...
