Austria's energy policy rests on three pillars: security of supply, energy efficiency and renewables. The country's efforts to decarbonise the economy have progressed as renewable energy use has ...

Austria has set ambitious climate targets, including a legally binding commitment to achieve climate neutrality by 2040, a full decade ahead of the EU's 2050 goal.¹ Meeting these goals will require ...

Good news: greenhouse gas emissions in Austria fell by 6.4 percent in 2023, as announced by the Federal Ministry for Climate Action and the Environment Agency at a press ...

What does Carbon Management mean? Austria aims to achieve climate neutrality by 2040. Since not all greenhouse gas emissions can be completely avoided ("hard to abate"), ...

Explore carbon removal policy in Austria. Track strategies, funding, and how CDR is emerging in national climate policy frameworks.

Austria's Climate and Energy Strategy serves as the cornerstone of its industrial decarbonisation efforts, outlining pathways to reduce emissions and achieve climate neutrality by 2040.

Between 2005 and 2023, Austria achieved large emissions reductions in energy industries (-53 %) and waste management (-63 %), while industry only had a modest decrease (-6 %), and agriculture ...

The plan unfolds in two phases. The first phase, currently underway, assesses Austria's current carbon management situation and outlines steps to regulate the reduction of hard-to-cut ...
