In this study, the long short-term memory (LSTM) neural network is first employed to forecast photovoltaic (PV) power generation and load demand, using operational data from a full ...

This paper presents the modeling, simulation, and control of a hybrid microgrid composed of a fuel cell, a photovoltaic (PV) array, and a battery energy storage

This study aims to comprehensively develop a modeling framework to evaluate the dynamic performance of a photovoltaic/thermal (PV/T) system integrated with a hybrid off-grid ...

Simulation results demonstrate the system's ability to provide reliable and high-quality power while mitigating the variability of renewable energy sources. This research supports the development of ...

This paper presents the design and simulation of a standalone DC microgrid system based on a solar PV system and a battery-based energy storage system. The system's performance under ...

In this paper, an isolated DC microgrid is simulated with solar photovoltaic (PV) as the RE source to supply power to resistive DC charges along with a hybrid energy storage system (HESS)...

The results demonstrate that the developed mathematical models are effective in simulating the electrical output characteristics of PV microgrid systems. Additionally, the model optimizes the power ...

In this paper, different models of electric components in a microgrid are presented. These models use complex system modeling techniques such as agent-based methods and system ...
