This review critically examines the integration of Artificial Intelligence (AI) and Deep Reinforcement Learning (DRL) into smart microgrid platforms, focusing on their role in optimizing ...

Traditional microgrid management systems often rely on pre-programmed rules or centralized control algorithms, which lack flexibility and adaptability. LLMs offer a more dynamic and ...

Microgrid Controls NLR develops and evaluates microgrid controls at multiple time scales. Our researchers evaluate in-house-developed controls and partner-developed microgrid ...

These AI models maximize the use of renewable energy, reduce wastage, and improve microgrid resilience and responsiveness to supply and demand fluctuations. Experiments ...

While the reviewed studies collectively address major themes in smart microgrid development, notable differences emerge in methodological ...

While the reviewed studies collectively address major themes in smart microgrid development, notable differences emerge in methodological emphasis, control strategies, and ...

State-of-the-art frameworks and tools are built into innovative grid technologies to model different structures and forms of microgrids and their dynamic behaviors. Smart grids' dynamic models were ...

Access our Python interface to Sandia's Microgrid Design Toolkit software API. Refer to our Python interface help pages as you navigate our resources and downloads. The following download is for ...
