---

In the quiet corridors of chemical laboratories, scientists have crafted molecules that do the extraordinary: they bend, absorb sunlight, hold its energy in their twisted forms, and then, with a ...

In 2018, scientists in Sweden developed "solar thermal fuel," a specialized fluid that can reportedly store energy captured from the sun for up to 18 years.

Solar energy storage liquids serve as innovative mediums to store and release renewable energy, maintaining efficiency and optimizing usage. These substances, including molten ...

Monash scientists designed a fast, safe liquid battery for home solar. The system could outperform expensive lithium-ion options. Engineers have created a new water-based battery ...

Researchers at Chalmers University of Technology in Sweden have demonstrated efficient solar energy storage in a chemical liquid. The stored energy can be transported and then ...

Battery engineers at Monash University in Australia, invented a new liquid battery for solar storage a few months ago. They developed a flow battery for their project, that could help ...

In 2018, scientists in Sweden developed "solar thermal fuel," a specialized fluid that can reportedly store energy captured from the sun for up to ...

A recent breakthrough could allow us to store solar energy directly into a liquid for up to 18 years. How's it work? And could this be a viable path forward for solar energy storage? Let's see if ...
