---

Spain is one of the first countries to deploy large-scale solar photovoltaics, and is the world leader in concentrated solar power (CSP) production. Spain is also one of the European countries with the ...

In 2023 and 2024, Spain added more solar power capacity than any other European country except Germany, whose economy is more than twice its size. Aggressive bidding between ...

Renewable energy is currently experiencing substantial development in Spain. With the goal of reaching climate neutrality by 2050, the country is implementing measures to achieve a 100 ...

Get to know the projects' power generation capacities in MWp or MWAC, annual power output in GWh, state of location and exact location on the map, name of the developer, year of connection to the ...

Spain's solar PV capacity reached 6 GW in 2024, making it the country's top power source with a 25.1% share, surpassing wind at 24.9%. Renewable generation grew 10.3%, ...

2024 was once again a record year for solar photovoltaic generation in Spain, as it set a new all-time annual high, this time reaching 44,520 GWh, an increase of 18.9% compared to 2023.

According to data from Red Eléctrica, solar photovoltaic (PV), with a total capacity of 32,043 MW, has surpassed wind power (32,007 MW) to become the technology with the highest ...

In Spain, the progress has been even more dramatic. Photovoltaics reached an all-time high, accounting for 21% of electricity generation, nearly double the EU average. This marks a ...
