---

The glass has the characteristics of high light transmittance, low light absorption, low reflectivity, excellent physical strength and remarkable flatness. It is an ideal packaging material for solar thermal ...

Relying solely on manufacturer terminology (which can sometimes be misleading, such as "Solar Tempered Glass" for what is actually semi-tempered glass) poses risks to installation durability.

Designed specifically for photovoltaic applications, this glass serves as a protective backsheet while allowing secure fastening of solar modules. Its balanced strength-to-weight ratio makes it suitable for ...

Let the light in with Mitrex Solar Glass -- a powerhouse in disguise, where photovoltaics meet limitless design, where color meets clarity. You're not just choosing glass; you're choosing a future where ...

Solar Glass combined with nanometer anti-reflective coating technology is applied for solar modules. It increases solar transmittance by way of decreasing light reflectance, thus increasing the solar cell ...

Our product portfolio features tempered, ultra-clear solar glass solutions with anti-reflective coating that diminishes reflectivity and improves light transmission.

Our 2 mm solar glass is exclusively produced in a float glass process. This industrial process adheres to very strict production tolerances and guarantees a very low defect density.

Semi-tempered modules consist of two pieces of semi-tempered glass (both 2.0mm) laminated with encapsulant and solar cells. In contrast, full tempered power generation modules use ...
