On a humid, overcast day in central Minnesota, a dozen researchers crouch in the grass between rows of photovoltaic (PV) solar panels. Only their bright yellow hard hats are clearly visible ...

While low-profile or robotic mowers can mow grass at solar farms, this will require higher maintenance. A low-growing grass type that can be weed-whacked (or grazed by animals) is therefore a good ...

If maintaining grass growth under solar panels is a priority, selecting shade-tolerant grass species can be beneficial. Some common shade-tolerant grasses include St. Augustine grass, Fine ...

The plant species present will impact the frequency, ease, and cost of managing this vegetation. Characteristics of common plant species for permanent ground cover in the northeast ...

Solar panels create partial shade, which benefits some crops but hinders others. Choose crops based on their shade tolerance: High Shade Tolerance: Leafy greens like lettuce, spinach, ...

Shade-Tolerant Vegetables: Some vegetables perform exceptionally well under partial shade. Lettuce, spinach, and kale are excellent examples. These leafy greens benefit from reduced ...

We offer several seed mixtures tailored to be used alongside a solar park project, which are designed to be both low maintenance and long term. By removing some of the taller species such as cocksfoot ...

Most leafy greens are suitable for growing under solar panels, as are vegetables such as tomatoes, beets, radishes, peppers, and more. Fruit trees, bushes, and grapevines also do very well ...
