Syria's ministry of electricity has announced a new 100-megawatt photovoltaic power station to be built to tackle the nation's energy crisis, following over a decade of unrest and economic ...

After more than a decade of war, destruction, and international isolation, Syria is taking a hopeful step toward solving one of its deepest problems -- the national energy crisis.

Syria is working to rebuild its energy sector after years of civil war and crippling sanctions. The country has suffered severe electricity shortages, with only those who can afford them using ...

Syrians now compare solar costs not to past subsidized rates but to current and anticipated bills, making solar systems appear increasingly practical. However, this economic shift ...

Now free of crippling sanctions, Syria is hoping renewable energy will become more than a patchwork solution.

Syria's new leaders are hoping renewable energy will now become more than a patchwork solution.

This article explores Syria's transition towards solar energy, highlighting government initiatives, private investments, and the challenges that remain in restoring its energy infrastructure.

The project aims to showcase how solar energy can act as a key driver for rebuilding Syria's energy infrastructure, promoting economic recovery, and reducing greenhouse gas emissions.
