---

Solar power generation capacity amounted to 1.12 billion kilowatts by the end of last month, surging 48.5 percent compared to the same period last year, according to the National ...

According to Global Energy Monitor's Global Solar Power Tracker, China has over 709 GW<sup>1</sup> of prospective solar capacity, representing over one-third of planned solar capacity worldwide in 2025.

In 2023, China's new energy investment grew rapidly, the investment in solar PV exceeded 670 billion CNY, while the investment in wind power exceeded 380 billion CNY.

Wind and solar power surpassed thermal power in terms of installed capacity for the first time ever in the first quarter of last year. As of March. 31, 2025, China's installed capacity of wind and ...

It is published annually as a March special issue of the China Energy Policy Newsletter. The Summary summarises the annual statistics of China's energy and power supply and consumption in the ...

Thermal generation still dwarfs wind and solar generation, but as Ember's co-founder Dave Jones points out, new zero emissions capacity is broadly meeting electricity demand growth, stemming further ...

Discover all statistics and data on Solar energy in China now on statista !

More than 720 GW of solar capacity are in development: about 250 GW under construction, nearly 300 GW in pre-construction phases, and 177 GW of announced projects, ...
