A new era for renewable power and energy security begins today (Tuesday 8 April) as Ofgem launches a new cap and floor investment support scheme, unlocking billions in funding to ...

Currently in the UK, there is 1.6 GW of operational battery storage capacity mostly with 1-hour discharge duration, i.e. 1:1 ratio of energy to power, GWh to GW.

Long-duration energy storage technologies store excess power for long periods to even out the supply. In March 2024, the House of Lords Science and Technology Committee said ...

Discover how long-duration energy storage can help the UK reduce gas reliance, cut curtailment costs, and achieve secure, low-carbon grid.

Large-scale battery systems, pumped hydro and other storage methods could capture the excess energy injected by windfarms on windy days and release it when needed. But are these ...

The UK's BESS capacity is set to triple by 2030. Discover how battery storage is crucial for decarbonization, grid stability, and long-duration storage.

This policy briefing explores the need for energy storage to underpin renewable energy generation in Great Britain. It assesses various energy storage technologies.

Utility-scale energy storage activity in the UK saw strong growth during 2021, with annual deployment growing 70% compared to 2020. Additionally, the pipeline of future projects increased by ...
