Water is the hidden link between power and performance in data centres. AI is transforming industries and promises extraordinary progress, but it cannot thrive without water. If we ...

At that speed, the WaterLily will generate 15 watts of power, though it can work in water that's as slow as 1 mph. Once you've found your stream, drop the device in and suspend it in the flow ...

Japan is reimagining water infrastructure with tech, transparency, and collaboration to boost resilience amid ageing systems and climate challenges.

Unboxing the USB Waterlily turbine and testing it at a moderately flowing creek. The USB version enables me to charge my power bank directly. My initial tho...

The 2030 Water Resources Group (WRG) offers an example of how multi-stakeholder collaboration builds trust, coordinates priorities, and turns commitments into action on water security. ...

Why it made the cut: The WaterLily Turbine is easy to set up and use anywhere you can access running water, providing charge capabilities for both 12V and USB devices.

WaterLily is a portable turbine loved by campers, paddlers, filmmakers, and off-gridders around the world. It charges phones, speakers, cameras, battery banks, and even 12V devices, by ...

How the Global Future Council on Energy Nexus is shaping integrated solutions to manage the energy, food and water nexus in a resource-constrained world.
