The residential segment plays an important role in Europe's solar market, accounting for roughly 24 percent of the European Union's cumulative solar capacity.

When it comes to solar power per capita, Europe's long-time solar leader, Germany, does not hold the first position. For the second year in a row, the Netherlands ranks first, reaching the remarkable ...

Solar power consists of photovoltaics (PV) and solar thermal energy in the European Union (EU). Solar power is growing in every EU country.

Solar power is now reducing household electricity bills across Western Europe, following decades of research, development, and government intervention aimed at addressing the high upfront cost.

Germany was one of the first countries to invest in solar technology, and now produces the most electricity from solar power in Europe.

In the EU, we're ever-more familiar with the possibilities of solar energy. It allows us to harness the energy of the sun and use it in our homes and business.

In our recent LinkedIn post highlighting the increase in solar output this year - a near 22% gain in Western Europe - we considered some of the drivers that contributed to that result. Now ...

The home-fitted renewable-energy sources are inexpensive and easy to install, and reduce electricity costs. Here's what can be learned from their surging popularity in Germany.
